

BUILDING & CONSTRUCTION EDUCATION

Designed specifically for anyone involved in contract acceptance or project management, and will be of particular interest to Construction and Project Managers, Project Coordinators and Site and Works Managers involved in, or intending to be involved in, the area of executing and managing project contracts and problem solving.

RISK MANAGEMENT

Aimed at the Building and Construction Industry

Course Overview:

This **ONLINE** course is delivered via a combination of video presentations and discussions, course workbook and case studies.

The course focuses on the fundamentals behind risk and its effective management. Course learning will be via analysis of key information presented and comprehensive case studies. A focus is on project risk causation and methods used to ensure risks are identified and managed throughout the project.
